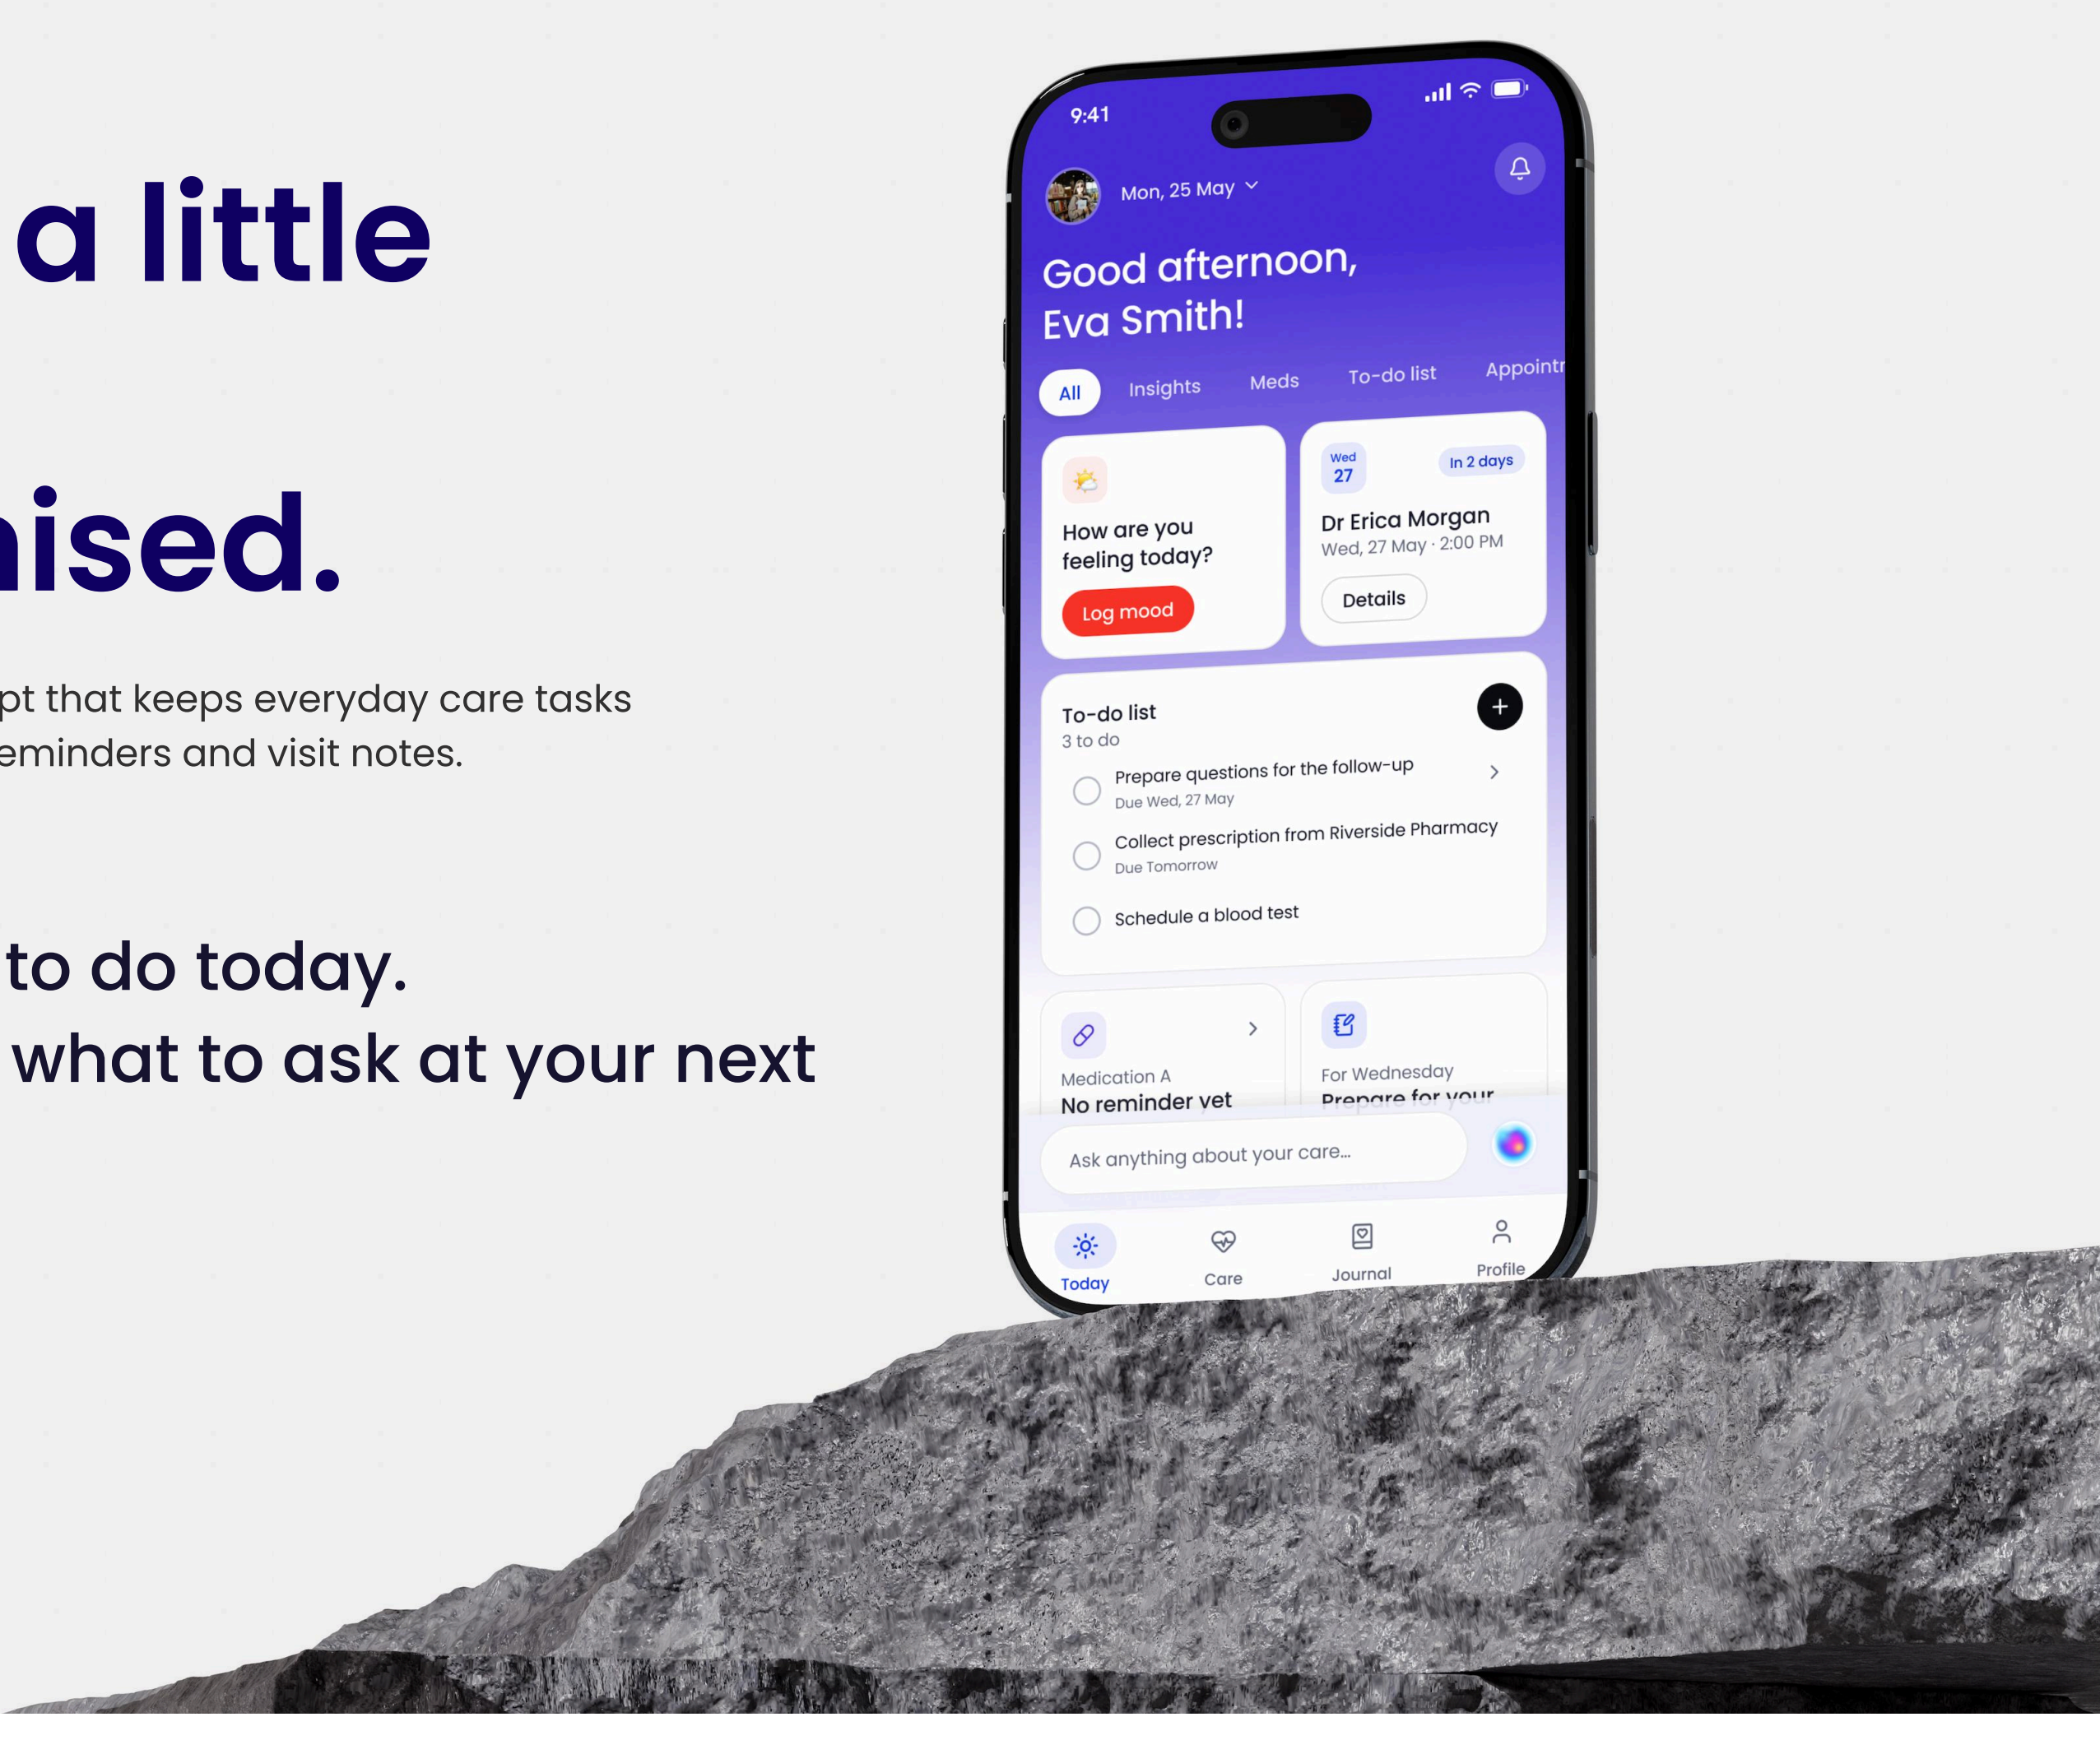
CARE BETWEEN APPOINTMENTS

Care, a little more organised.

A mobile app concept that keeps everyday care tasks together, including reminders and visit notes.

Know what to do today.
Remember what to ask at your next visit.



01 / MEET GEMA

What is Gema?

Gema helps people keep track of everyday care tasks between appointments. They can set reminders, save personal notes and prepare questions for their next visit. Each change can be checked and edited before it is saved.

THE PROBLEM

Too many places to check.

An appointment may be on the calendar, a reminder on the phone and questions in a separate note. This was the problem I wanted to explore.

THE SOLUTION

Keep everything together.

One place to see upcoming tasks, add reminders and collect notes for a visit.

WHAT I CREATED

A complete app concept.

40 screens and states showing how to manage daily care tasks and prepare for appointments. User testing is the next step.

PROJECT TYPE	DESIGN FOCUS	PLATFORM
Personal portfolio concept	App structure, user flows and UI design	Mobile

02 / UNDERSTANDING THE PROBLEM

Getting ready for a visit can mean checking several places.

I wanted to explore whether keeping care information together could make visit preparation easier. Gema brings appointment details together with reminders and personal notes. I still need to test this idea with people.

01 / CALENDAR

When is my next visit?

The date is on the calendar, but the notes and questions may be somewhere else.

02 / NOTES

What did I want to ask?

A question or observation needs a place where it can be saved and found again.

03 / REMINDERS

What do I need to do?

A reminder should clearly show the task and when it is due.

THE QUESTION BEHIND THE DESIGN

How can people keep their care tasks in one place and check each change before saving it?

03 / RESEARCH & EXPLORATION

What helped shape the idea?

The concept draws on published guidance about preparing for appointments and supporting ongoing care. These sources gave me a starting point, but they do not tell me how people would use Gema.

01 / NIH GUIDANCE

Write questions before a visit.

NIH suggests listing concerns before an appointment. For Gema, this pointed to a place where people could collect and edit their questions.

02 / WHO REPORT, 2003

Reminders are one part of care.

WHO describes the need for wider support around ongoing care. Gema focuses on organising tasks. A reminder alone cannot show that someone took their medication.

What I still need to learn

Where do people save care tasks today?
How do they prepare for a follow-up?
What would they want to check before saving?
When would they prefer typing or speaking?

Ideas to test

A daily view may make tasks easier to find.
Quick notes may help with visit preparation.
People may want to edit their visit questions.
A final check may make changes clearer.

Research so far

This concept has not been tested with users yet. Interviews and task-based testing would help me check these ideas and improve the design.

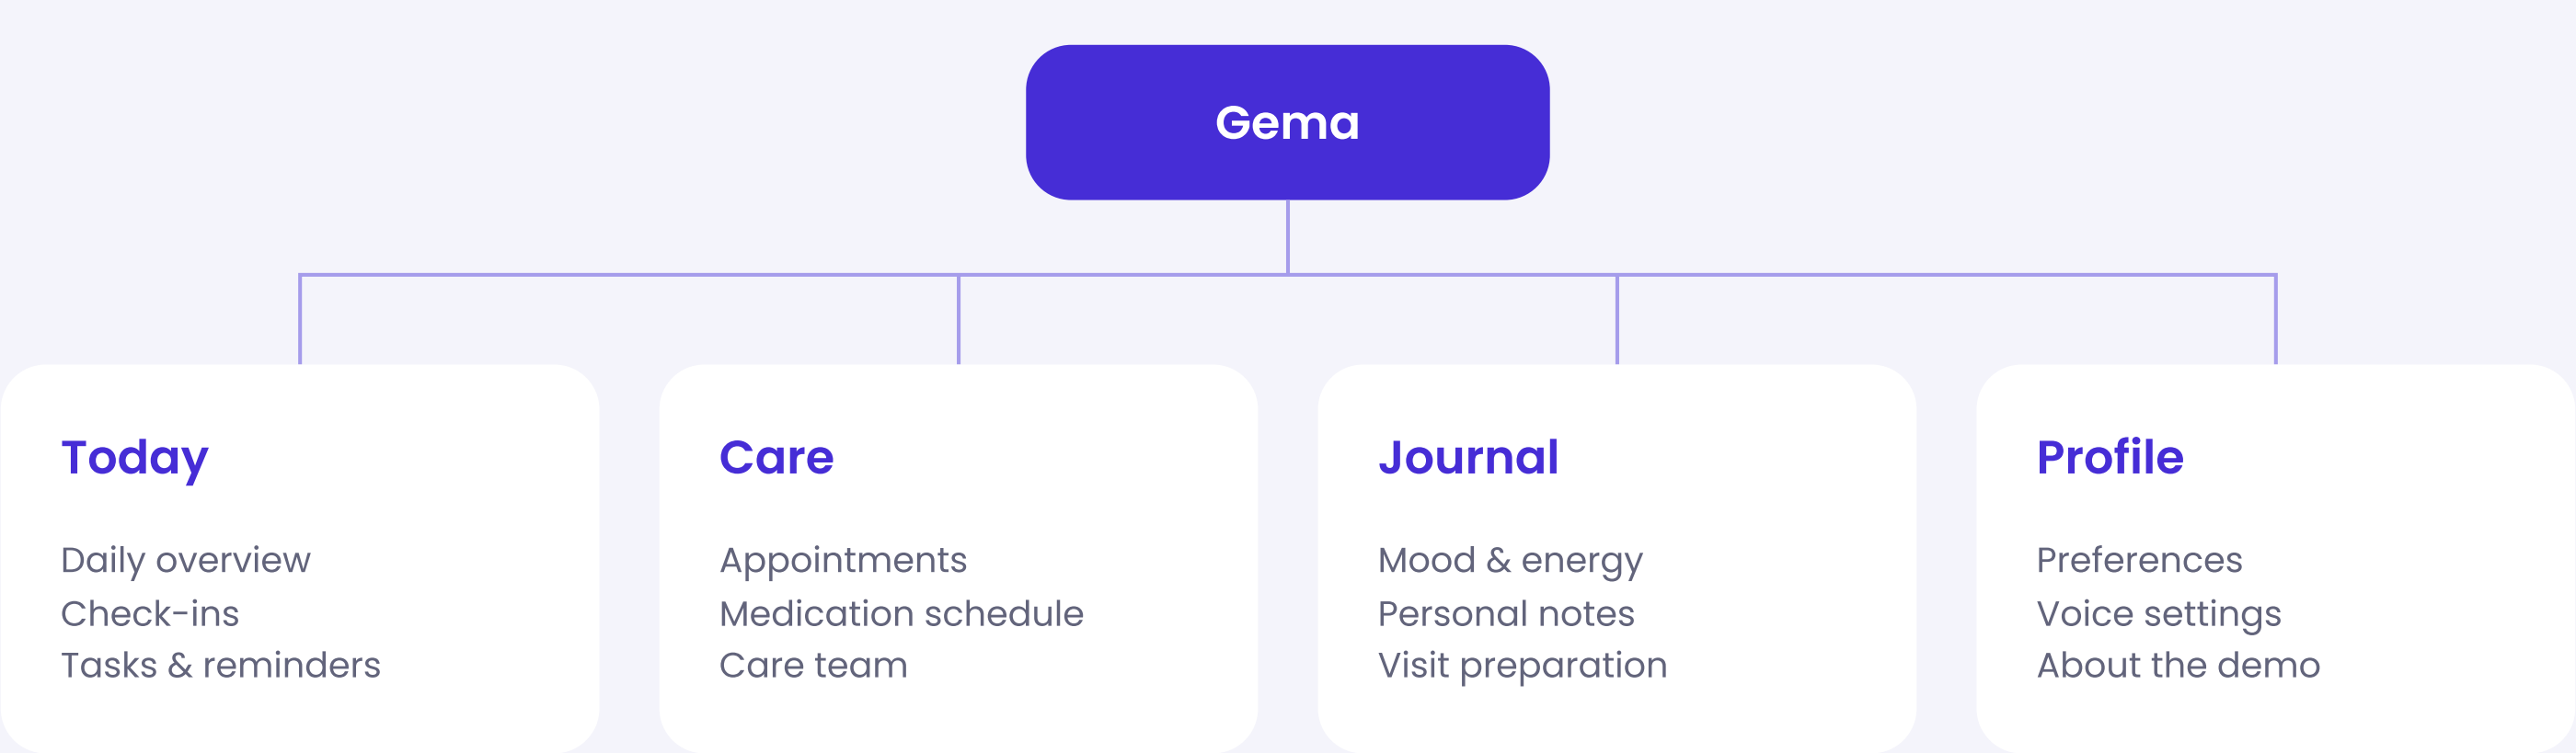
04 / APP STRUCTURE & USER FLOWS

Where things live. How each task gets done.

The app has four main areas: Today, Care, Journal and Profile. People can open these directly or type a request to start a task. Voice is optional.



A / SET A REMINDER

Ask Gema → Type a request → Check / edit → Save reminder

Ask for missing details before saving. People can cancel without changing anything. Reminder delivery is a demo.

B / CHANGE AN APPOINTMENT

Open appointment → Choose a new time → Check the change → Confirm new time

People can go back to edit or cancel. The final check explains that the old appointment will be replaced. Booking is a demo.

C / PREPARE FOR A VISIT

Record a note → Add questions → Read / edit → Save visit notes

People can add questions themselves, even if they have no journal entries.

05 / VISUAL STYLE & DESIGN SYSTEM

A clear, consistent look across the app.

Purple highlights important actions. White cards group related tasks. The same button styles and card layouts repeat across the app.

Brand purple	Action violet	Lavender surface	Primary ink
#462DD6	#6048E8	#F1EFFE	#191B32

TYPEFACE / POPPINS

Headings / Medium & SemiBold
Body / Regular
Labels & controls / Medium

SPACING & LAYOUT

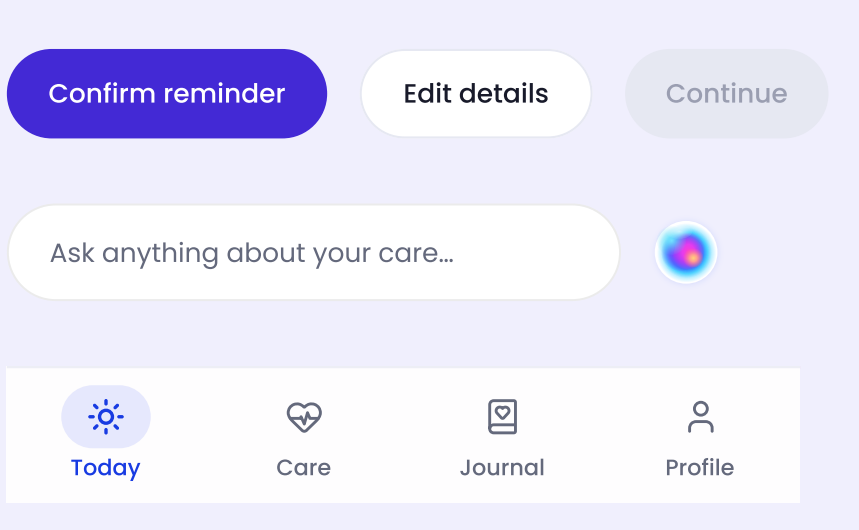
Give each task room.

Spacing separates each task. Headings stand apart from the details, and the controls have room around them.

8 16 24 32 48

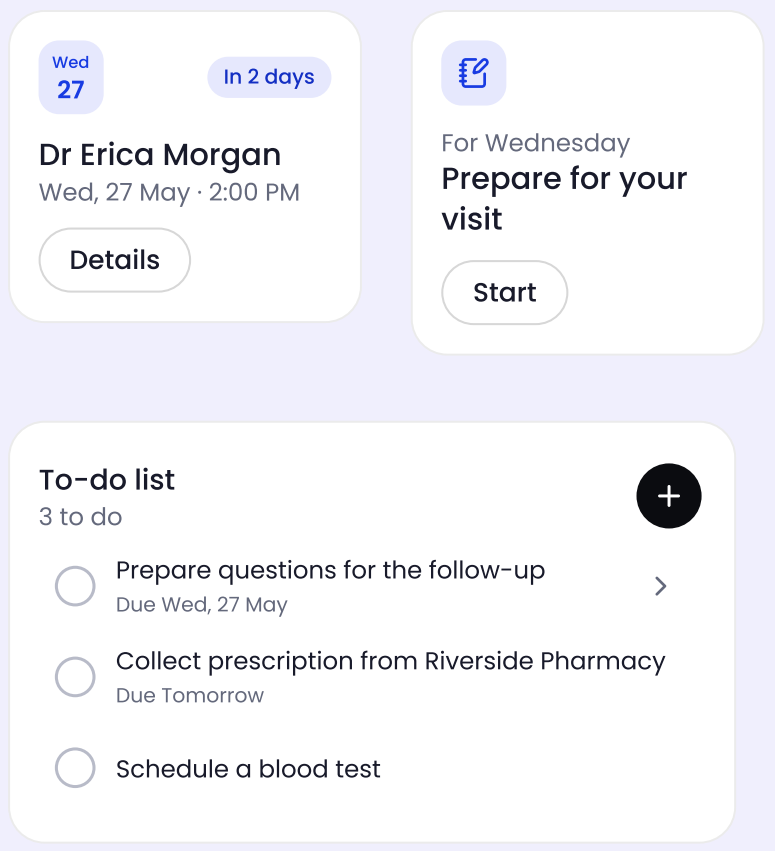
REUSABLE COMPONENTS

Buttons & navigation



People can use buttons and tabs to reach a task without typing a request.

Cards & grouped tasks

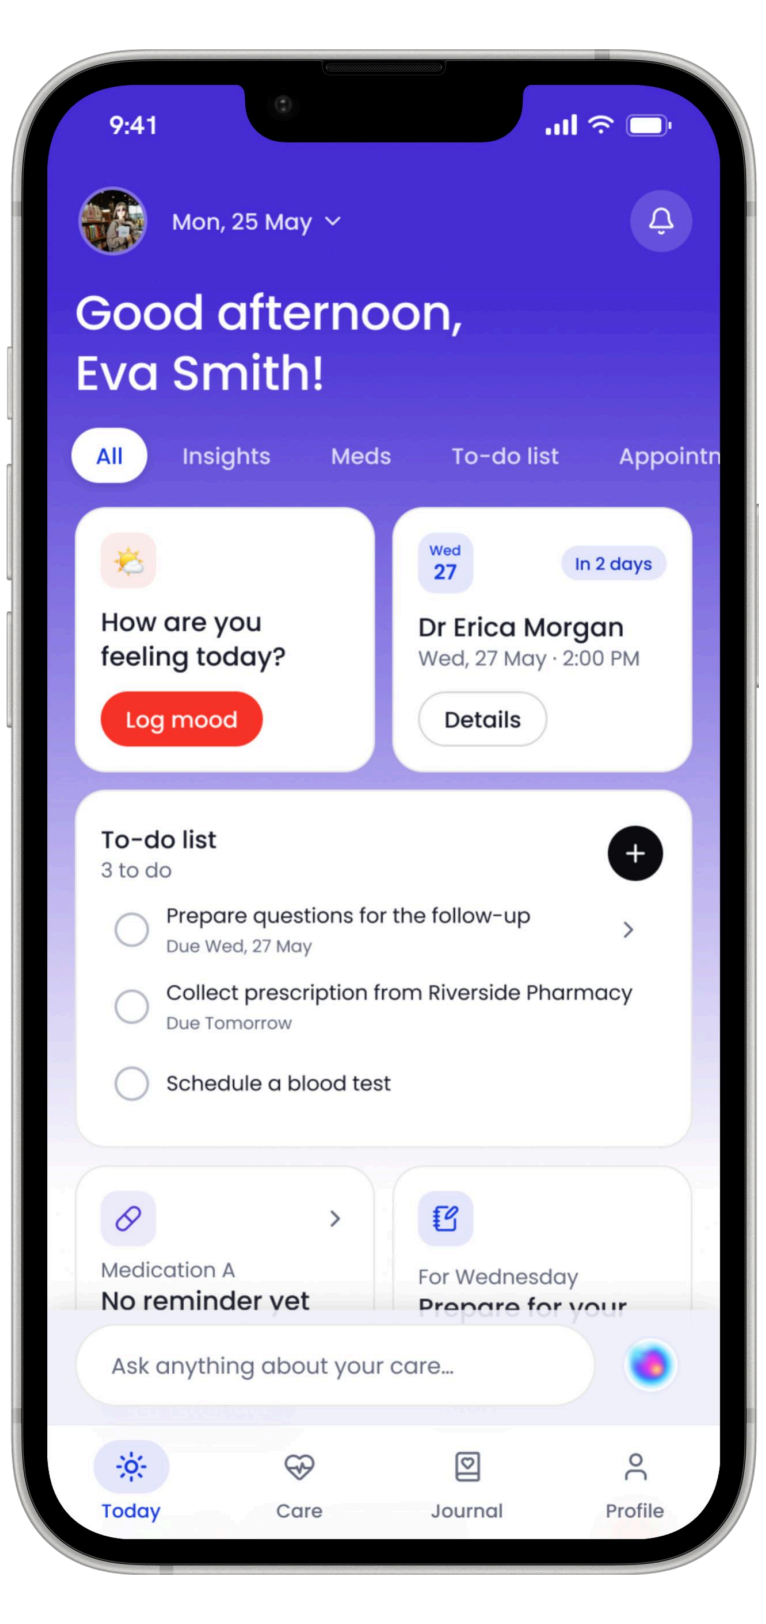


What I would check next

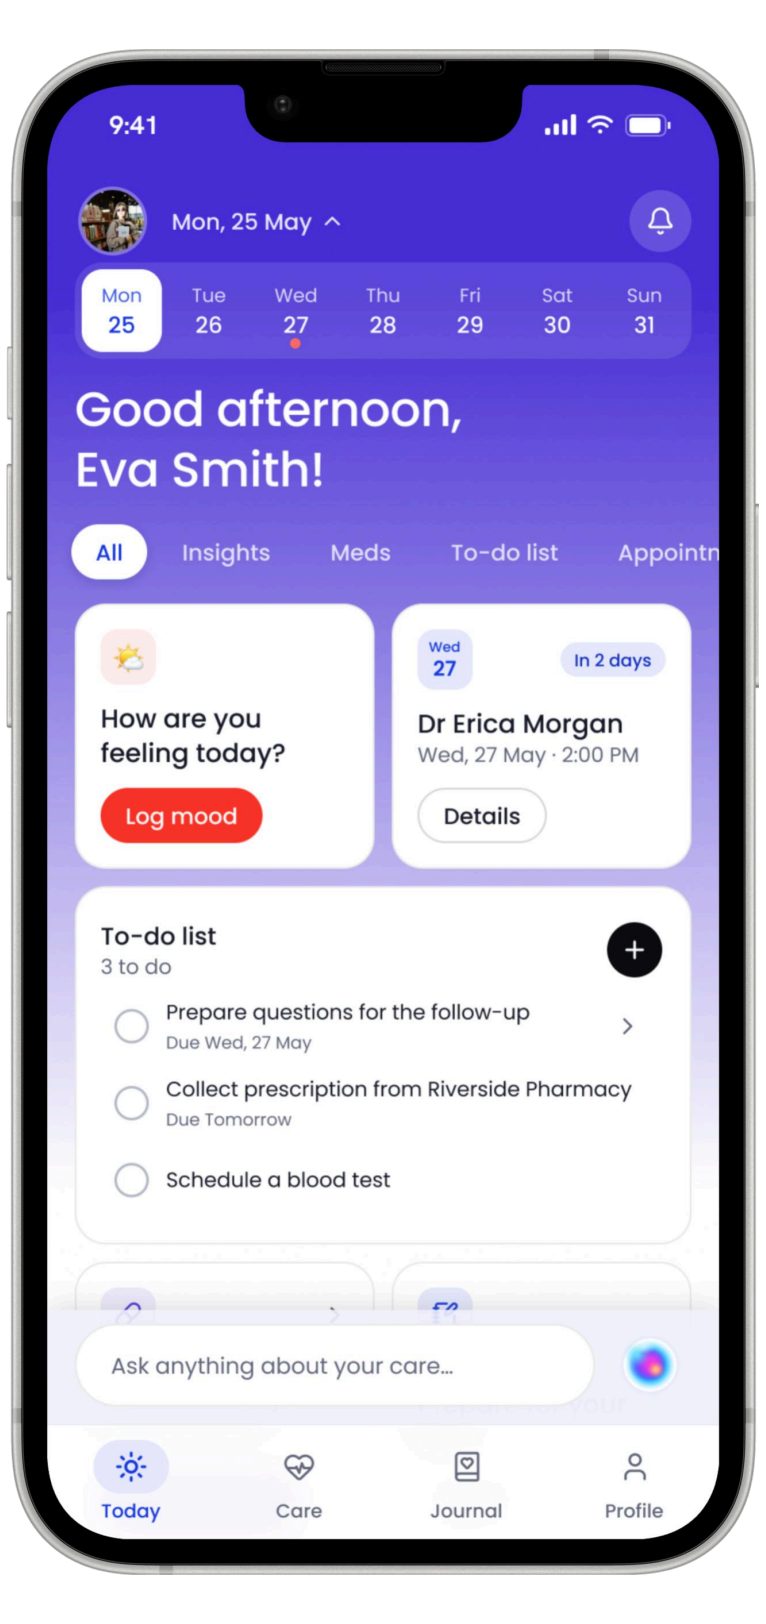
Can people read the text comfortably, find the next action and tap the controls easily? User testing would help me improve these details.

01 / YOUR DAY AT A GLANCE

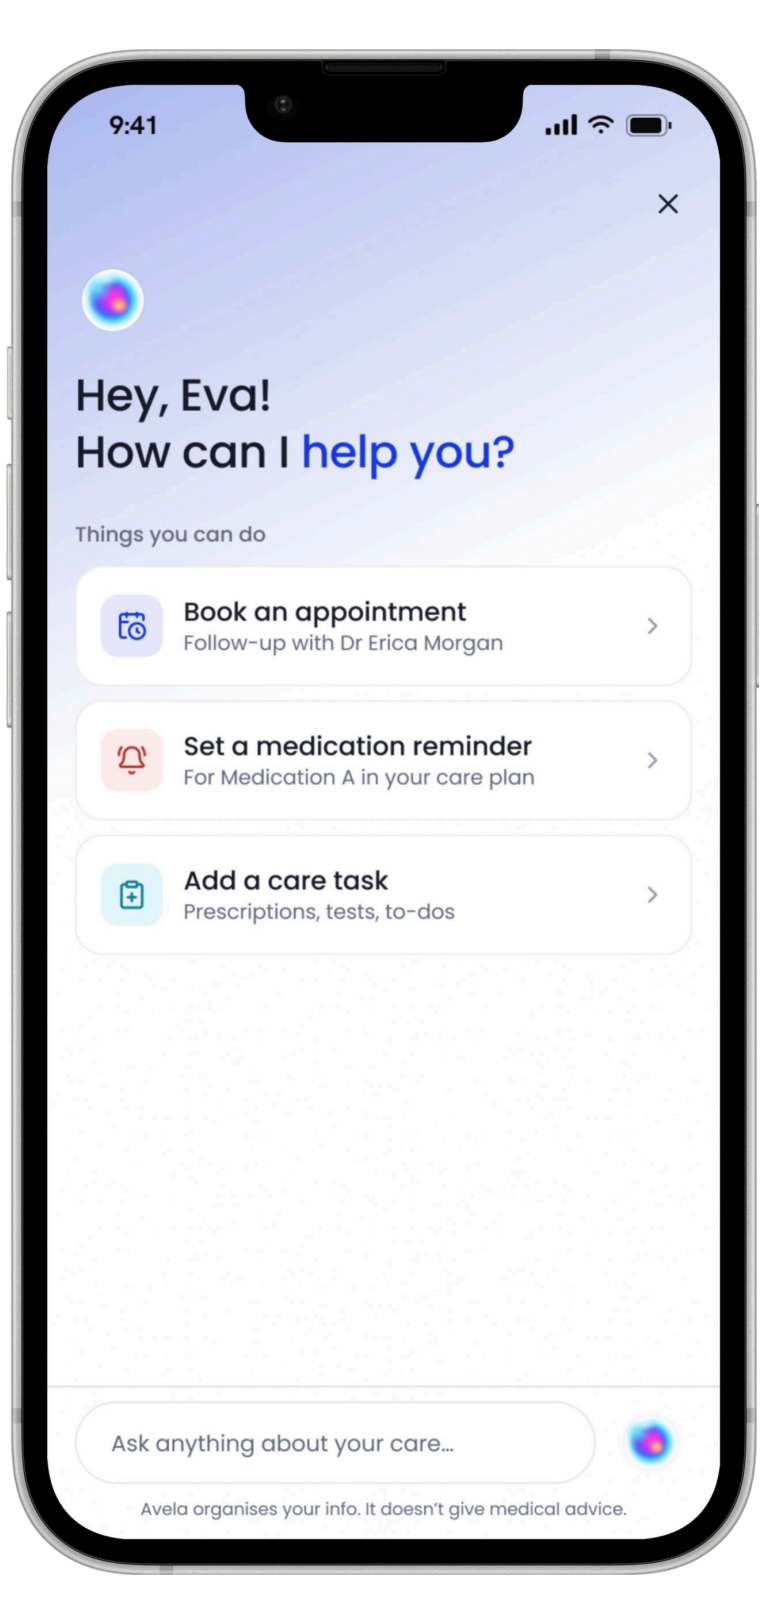
See daily care tasks and open the assistant when you need a hand.



Today, in one view



Another daily overview



9:41
Hey, Eva!
How can I help you?
Things you can do
Book an appointment
Follow-up with Dr Erica Morgan
Set a medication reminder
For Medication A in your care plan
Add a care task
Prescriptions, tests, to-dos
Ask anything about your care...

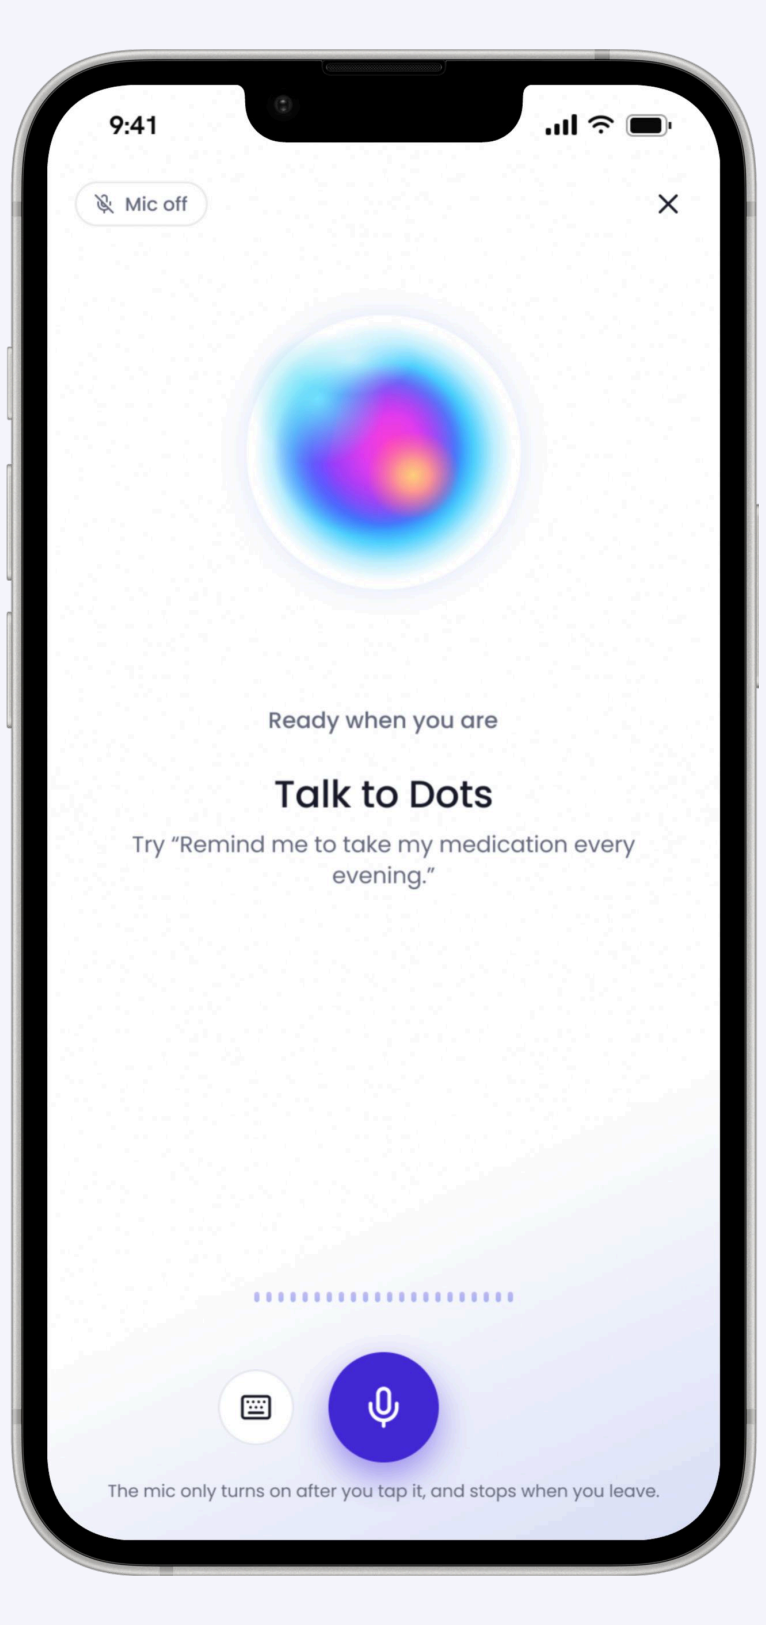
02 / SPEAK, REVIEW, CONFIRM

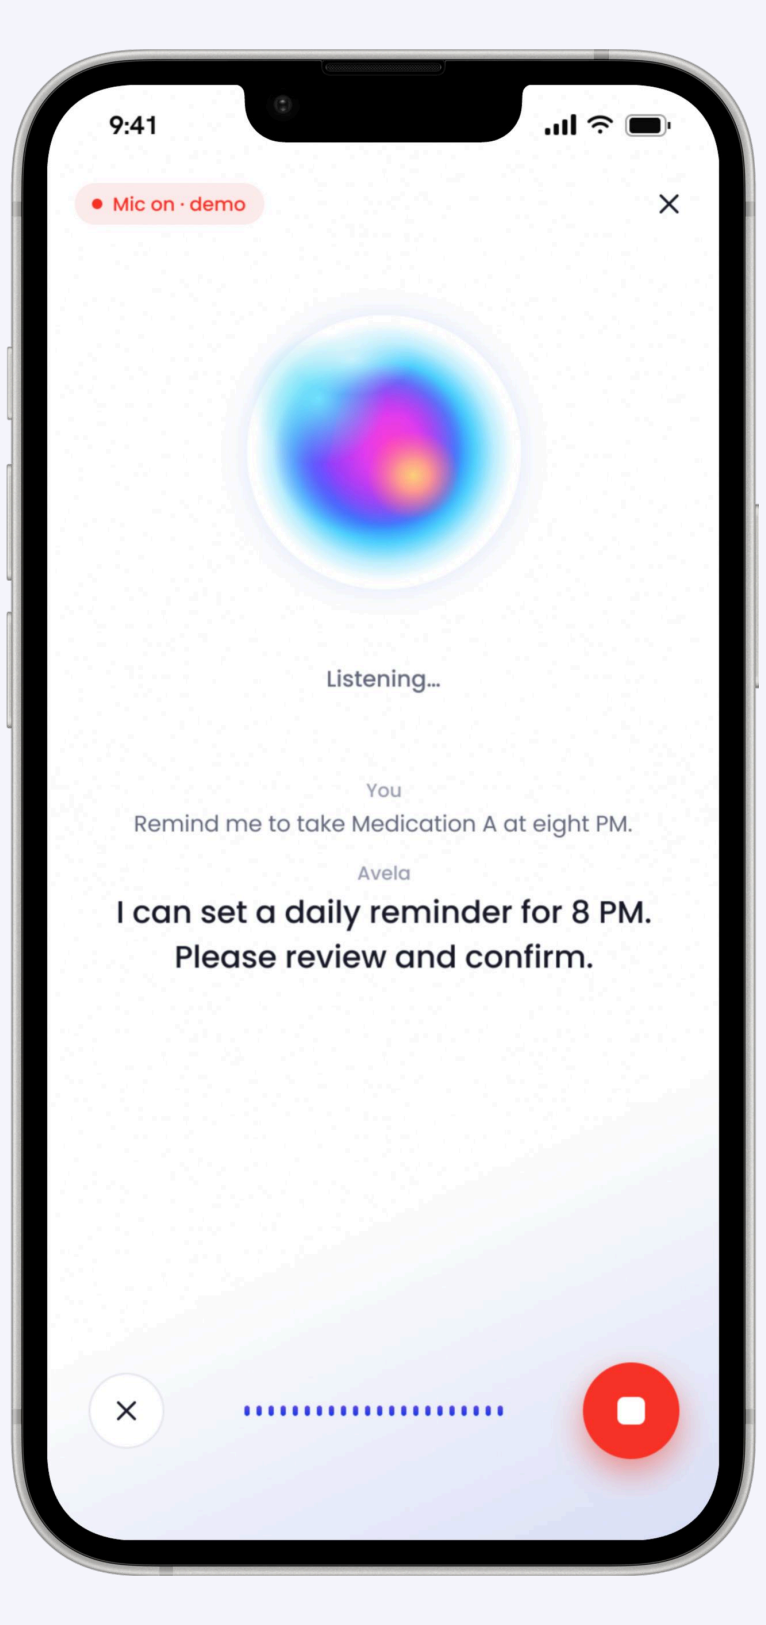
Voice is an optional route. Listening, speaking and review states make each step clear.



Try "Remind me to take my medication every evening."

The mic only turns on after you tap it, and stops when you leave.

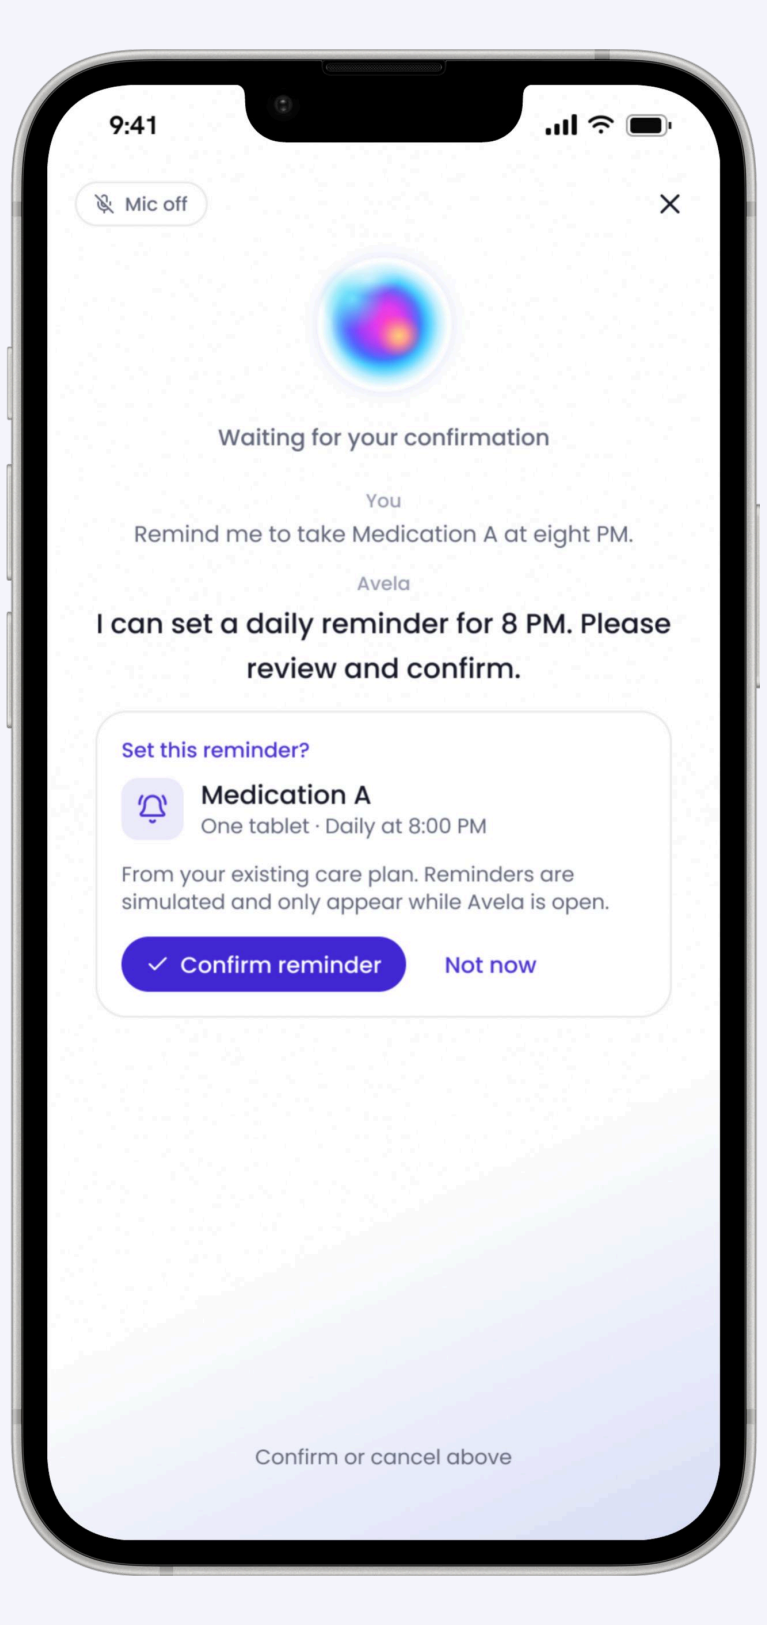
Start a voice request



Remind me to take Medication A at eight PM.

I can set a daily reminder for 8 PM. Please review and confirm.

Follow the conversation



Remind me to take Medication A at eight PM.

I can set a daily reminder for 8 PM. Please review and confirm.

From your existing care plan. Reminders are simulated and only appear while Avela is open.

Review the proposed action

03 / KEEP CARE DETAILS TOGETHER
