Style Guide For CMP Autobot

CMP Autobot is the Compass Group India **ingredient–article mapping** workspace — a neutral, data-dense desktop tool that keeps operators focused on rows, not chrome. It is a **light-only, compact** system built on **Next.js · Tailwind v4 · shadcn/ui · Radix**. One amber brand (`#C68A1E`), four status tones, one typeface (**Inter**) across the entire UI. Neutrals are a cool slate (oklch hue 255), softened from pure black per client feedback. Every value below is taken verbatim from the current prototype's `globals.css` tokens and component source; oklch tokens are shown alongside their sRGB hex. Icons are **lucide-react**. Base font size is **93.75%** (15px) for ~90%-zoom density.

01 Color

Brand Gold

A single amber accent for identity only — sidebar wordmark, top-stripe, active nav, brand-soft selected states. Never a status color.

Brand	Brand Hover	Brand Ink	Brand Soft	Primary ink

HEX #C68A1E	#B27A18
	--brand-hover
		#7A5310
		--brand-ink
			#FFF1D6
			oklch(.965 .04 80)
				Primary
				#232932
				oklch(.28 .018 255)

Surfaces

Background	Card / Popover	Secondary / Muted	Accent (hover)
#FEFDFC --background · oklch(.995 .002 95)	#FFFFFF --card · oklch(1 0 0)	#F0F2F4 --muted · oklch(.96 .004 250)	#EBEFF4 --accent · oklch(.95 .008 250)

Text / Ink

Foreground	Primary (buttons)	Muted Foreground	Ring (focus)
#212428 --foreground · oklch(.26 .008 255)	#232932 --primary	#646970 --muted-foreground · oklch(.52 .012 255)	#87909C --ring · oklch(.65 .02 255)

Borders & Inputs

Border	Input	Destructive
#E3E5E7 --border · oklch(.92 .004 255)	#E9EBEE --input · oklch(.94 .004 255)	#DF2225 --destructive · oklch(.58 .22 27)

Status & Queue Colors

Color is reserved for **state**. The four queues each own one tone + a desaturated soft background; status pills reuse the same family. Solid greens/blues are hardcoded brand hexes; amber/red queue tones are oklch.

Green — Matches	Amber — Likely	Red — No Match	Blue — Retired
#14874E · --green-queue	#CA8A10 · oklch(.68 .14 75)	#D33B36 · oklch(.58 .19 27)	#193CB8 · --blue-queue
Soft #D5F9E0	Soft #FFF0CC	Soft #FFE8E3	Soft #E1EFFF
CircleCheck	CircleAlert	CircleHelp	Eye

Queue semantics — **Green** auto-matched, ready for CookBook · **Amber** likely match, review the Autobot's reasoning · **Red** no credible match, human investigation · **Blue** mapping valid but article retired in SAP. Queue order in the UI: **Amber → Red → Green → Blue**. Soft backgrounds pair with the solid tone as text (e.g. green-soft + green). Dark mode tokens exist in `globals.css` but the app ships light-only.

02 Typography

Typeface — Inter (one font, whole UI)

Aa

Inter

The single typeface for the entire UI — headings, tables, buttons, labels and body. Variable `--font-inter`, loaded via `next/font/google`. Numbers are **tabular** by default (`.numeric-tabular`) so counts and IDs line up across rows. Font features `"cv11","ss01"`. No serif / display face is used — headings are simply Inter at a heavier weight + tighter tracking.

Weights · Regular 400 Medium 500 Semibold 600 Bold 700

Type Scale

Token	Size	Line / Weight	Letter spacing	Usage
Display	36px	1.1 / 700	-0.02em	Hero numbers — "5 / 20 completed today"
H1	26px	1.2 / 600	-0.015em	Section title — "Morning brief"
H2	18px	1.3 / 600	-0.01em	Card heading — "Work progress"
H3	14px	1.4 / 600	-0.005em	Sub-section — "Likely matches"
Body	13px	1.55 / 400	0	Default paragraph / table cells
Small	12px	1.5 / 400	0	Meta / captions
LABEL	11px	1.4 / 600	0.1em	ALL-CAPS column & group labels
Mono	11px	1.5 / 500	0	IDs, counts — "#190332 · 04:12 IST"

Most of the app sits between **11px and 14px**. The `html` base is **93.75%** (15px), so all rem-based Tailwind utilities scale down proportionally to a compact ~90%-zoom density. Chrome titles: sidebar wordmark 14px/600, top-bar title 15px/500.

03 Spacing & Radius

Spacing Scale

Tailwind's default 4px scale, applied compactly. Tight inner padding (1.5–2.5 = 6–10px) keeps tables dense; section gaps use 12–16px.

2px 4px 6px 8px 10px 12px 16px 24px

Token	px (×0.9375)	Usage
0.5	~2 px	Icon→label micro gaps, badge padding-y
1 – 1.5	~4–6 px	Pill gaps, chip padding, nav gap-0.5
2 – 2.5	~8–10 px	Cell padding, nav item px-2.5 py-1.5
3	~12 px	Sidebar px-3, card inner padding
4	~16 px	Card padding, panel gaps
6	~24 px	Top-bar px-6, page gutters

Key fixed heights — top-bar **h-12** (48px), buttons **h-9** default / h-8 sm, sidebar **240px** expanded / **70px** collapsed, brand top-stripe **3px**.

Border Radius

Base token `--radius: 0.625rem` (10px). Tailwind maps sm/md/lg/xl off it.

6 px	8 px	10 px	14 px	full
radius-sm — pills, badges, site button	radius-md — buttons, inputs, badges	radius-lg — cards, dialogs	radius-xl — large surfaces	queue chips, avatars, dots

Elevation

Shadows are restrained — most surfaces rely on 1px borders, not elevation.

- Button / site card `shadow-sm — 0 1px 2px rgba(0,0,0,.06)`
- Dropdown / popover `shadow-md`
- Top-bar `bg-background/85 · backdrop-blur`

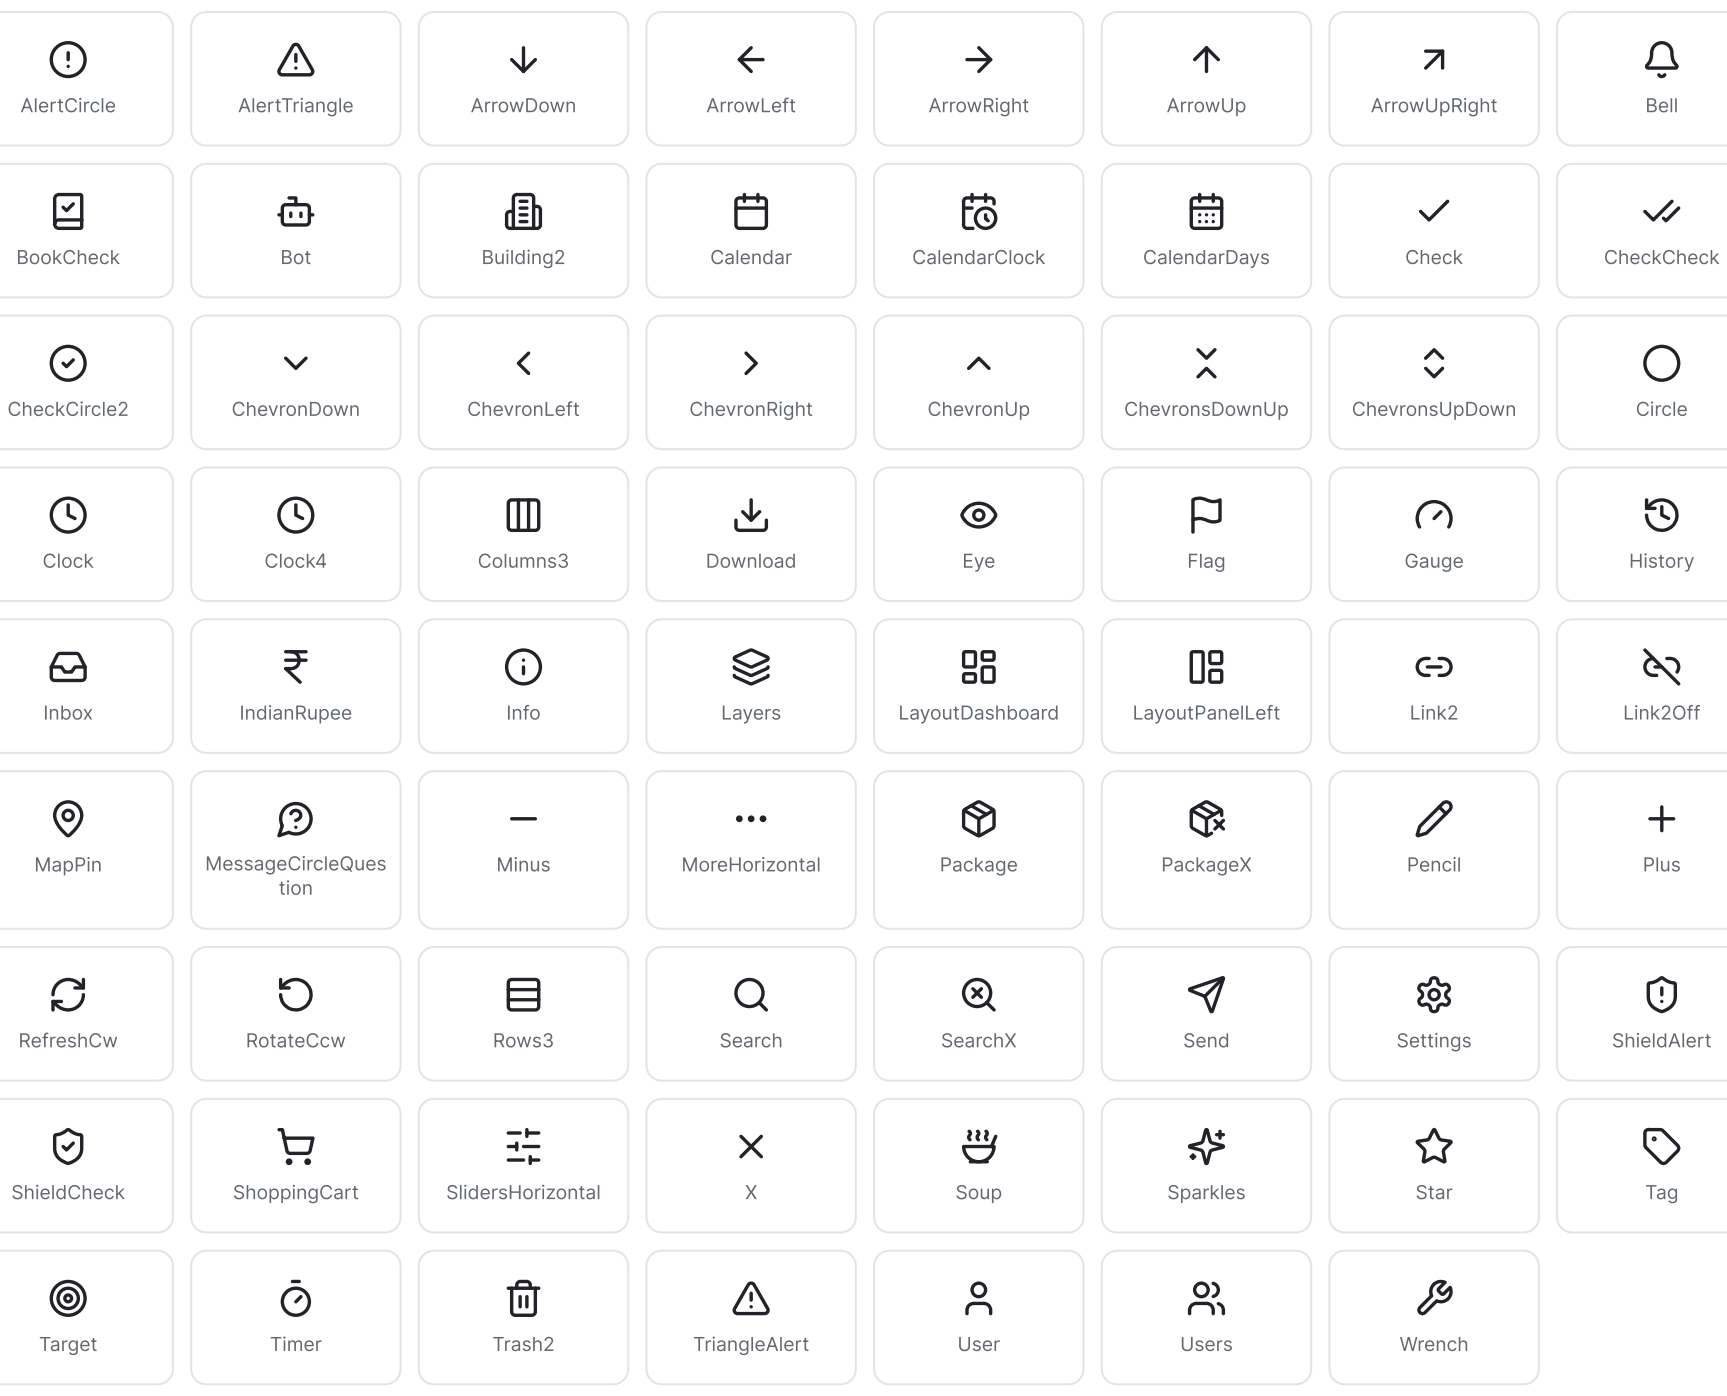
04 Iconography

Icon Sizes

Context	Class	px	Usage
Micro	h-3 w-3	12 px	Queue chips, status pills, inline meta
Small	h-3.5 w-3.5	14 px	Site button, top-bar actions, chevrons
Default	h-4 w-4 / [&_svg]:size-4	16 px	Nav icons, button icons (shadcn default)
Large	h-5 w-5+	20 px+	Empty states, hero / dialog icons

Library: **lucide-react** only — the single icon set for this app. Default stroke width **2**. No other icon libraries, no SVG icon files. Size with the `size`/Tailwind `h-*/w-*`, never a `weight` prop.

Core Icon Set



05 Buttons & Pills

Button Variants — shadcn cva (button.tsx), 6 variants

Default Secondary Outline Ghost Destructive Link

`default` bg-primary · `secondary` bg-secondary · `outline` border + bg-background · `ghost` hover:bg-accent · `destructive` bg-destructive · `link` underlined. All share `rounded-md · text-sm font-medium · gap-2 · [&_svg]:size-4 · shadow-sm` (except ghost/link), focus `ring-2 ring-ring ring-offset-2`, `disabled:opacity-50`. **In practice the app leans on outline and ghost** — toolbar/Export/row actions are outline; icon-only row actions are ghost. Default/destructive are reserved for the single primary action in dialogs.

Sizes

sm · h-8 · text-xs default · h-9 lg · h-10 xl · h-12 · text-base disabled

`sm h-8 px-3 text-xs` · `default h-9 px-4` · `lg h-10 px-6` · `xl h-12 px-8 text-base` · `icon h-9 w-9`. Top-bar Export Excel = `outline · sm · shadow-none`; "Add user" = `default · sm`.

Worklist Decision Buttons — custom inline, not a Button variant

Confirm Reject + Link APL Confirm Reject

The dense table's Confirm/Reject are bespoke `<button>`s (`InlineActions`), **text-only, no icons**, sized to the row rhythm: `h-6 · rounded-md · px-2.5 · text-[11px] font-medium`. **Confirm** `bg-green-50/70 · text-green-600 · border-green-200/60` (hover green-100/80). **Reject** `bg-red-50/70 · text-red-500 · border-red-200/60` (hover red-100/80). Disabled → `opacity-35`. **Link APL / Add Article** use the shared `SECONDARY_BUTTON: h-6 · border-border · bg-background · text-foreground/80 · hover:bg-accent` with a 12px **Plus**. Always paired Confirm → Reject, never swapped.

Badges

default secondary destructive outline muted

Badge base: `rounded-md border px-2 py-0.5 text-xs font-medium`. Five variants from `badge.tsx` cva.

Inputs & Select

Full name	Email	Role
e.g. Priya Sharma	priya@compass.in	Admin

Search ingredient or article...

Input (`input.tsx`): `h-9 w-full rounded-md border-border bg-background px-3 text-sm shadow-xs`; placeholder `text-muted-foreground`; focus `ring-2 ring-ring` (3rd field shown focused); disabled `opacity-50`. **Select** (Radix, `select.tsx`): same trigger metrics with a trailing `ChevronDown`; opens a `popover` menu of `SelectItem`s. **Label** (`label.tsx`): `text-sm font-medium leading-none`, tied via `htmlFor`.

Checkbox

☐ Unchecked

☑ Checked (#16A34A)

▣ Indeterminate (#F59E0B)

☑ Bengaluru Central Kitchen	BCK-001
☐ Whitefield Hub	WFH-014

Checkbox (`checkbox.tsx`, Radix): `14×14 · rounded-[3px] · border-[1.5px] #9CA3AF`. Checked → green `#16A34A` + **Check** icon; indeterminate → amber `#F59E0B` + **Minus** icon (partial multi-select), white glyph at `strokeWidth 3`. Used for the multi-row Worklist selection and the site multi-select list.

Toggle Switch

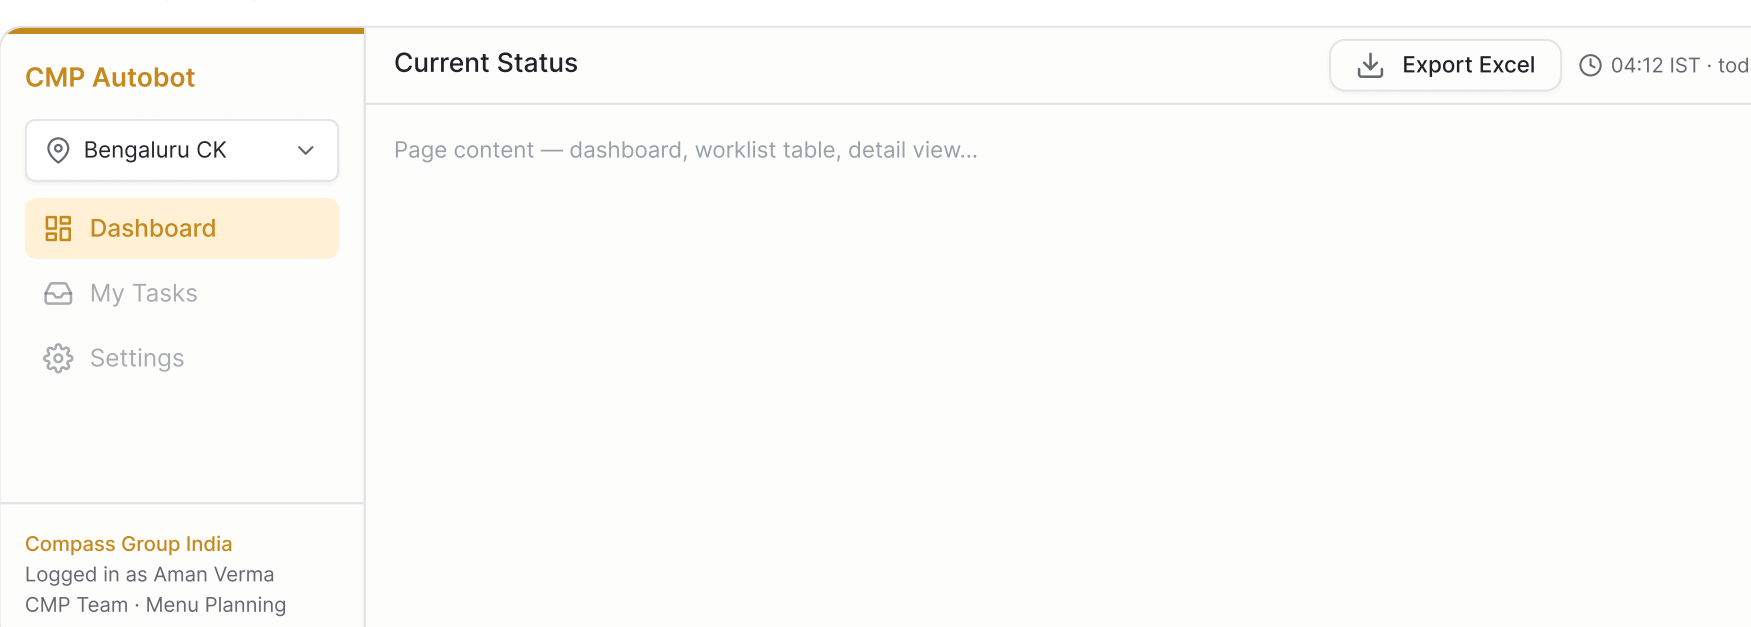
On Off Disabled Active

Switch (`switch.tsx`, Radix): track `h-5 w-9 (20×36) rounded-full`, thumb `h-4 w-4 bg-background shadow-lg` sliding `translate-x-4`. Checked → `bg-zinc-500 (#71717A)`, unchecked → `bg-input (#E9EBEE)`, disabled `opacity-50`. Appears bare in table rows (user "Active") and label-paired in Settings → Configuration / Sites toggles.

06 Template Level Components

App Shell

A persistent left sidebar + sticky top-bar wrap every route. The sidebar is sticky, viewport-tall, and scrolls independently of the page. No phone frame — this is a desktop workspace.



Page content — dashboard, worklist table, detail view...

Compass Group India
Logged in as Aman Verma
CMP Team · Menu Planning

Sidebar `w-240px` (collapses to `70px`), `bg-card/40`, sticky `h-screen`, 3px `bg-brand` top-stripe, wordmark `text-brand 14px/600`. Active nav item: `bg-brand-soft text-brand font-medium`; inactive `text-muted-foreground/55`. **Site selector**: white button, `ring-1 ring-zinc-200`, opens a fixed dropdown. **Top-bar** `h-12 · bg-background/85 · backdrop-blur · border-b`, title 15px/500, Export Excel (outline sm) + last-ODS-refresh stamp.

Worklist Table (data-dense rows)

ARTICLE	MOG INGREDIENT	CONFIDENCE	QUEUE	DECISION
Oil, Fortune, Refined Sunflower ART-10633	Sunflower Oil	98%	● Matches	Confirm
Jam, Kissan, Mixed Fruit ART-10445	Mixed Fruit Jam	76%	● Likely Matches	Confirm Reject
Spice, MDH, Chana Masala ART-10901	— no candidate —	—	● No Match	+ Link APL

Header labels uppercase 10px `text-muted-foreground`; rows 1px `border-border` dividers; IDs mono + `tabular-nums`; confidence right-aligned tabular. One queue pill per row; Confirm/Reject pair only where a decision is pending.

Card / Panel

73
Total Ingredients

Card: `rounded-lg border border-border bg-card`. Hero numbers are Inter `font-bold` + tabular-nums with an uppercase label.

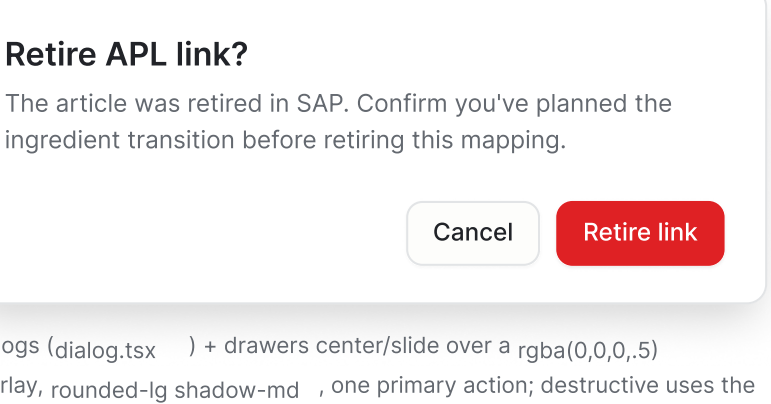
Inline Notifications

NEEDS ATTENTION
30 items in Likely Matches need a decision. →

INCREMENTAL LOAD
3 new ingredients added on 01 Feb. →

Needs-attention banners reuse the queue soft bg + tone text; incremental-load uses the info/blue family. Icon + text always together.

Confirm Dialog (destructive)

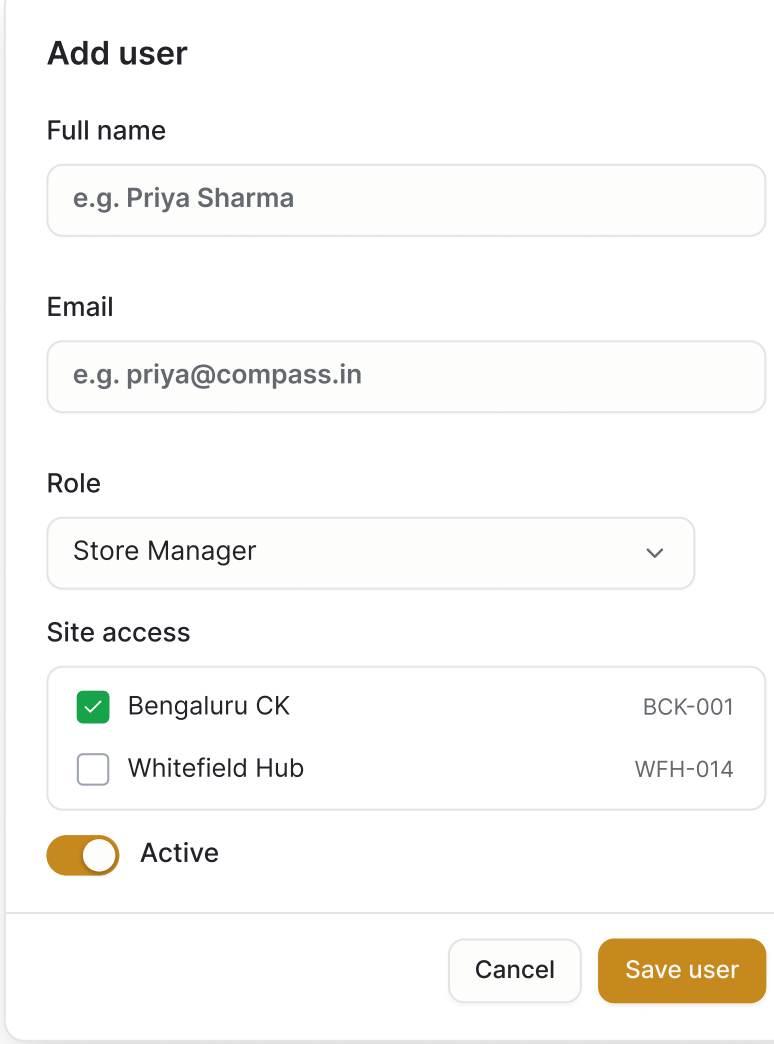


Retire APL link?

The article was retired in SAP. Confirm you've planned the ingredient transition before retiring this mapping.

Dialogs (`dialog.tsx`) + drawers center/slide over a `rgba(0,0,0,.5)` overlay, `rounded-lg shadow-md`, one primary action; destructive uses the `b-dest` primary.

Form Modal — Add User



Add user

Full name: e.g. Priya Sharma

Email: e.g. priya@compass.in

Role: Store Manager

Site access

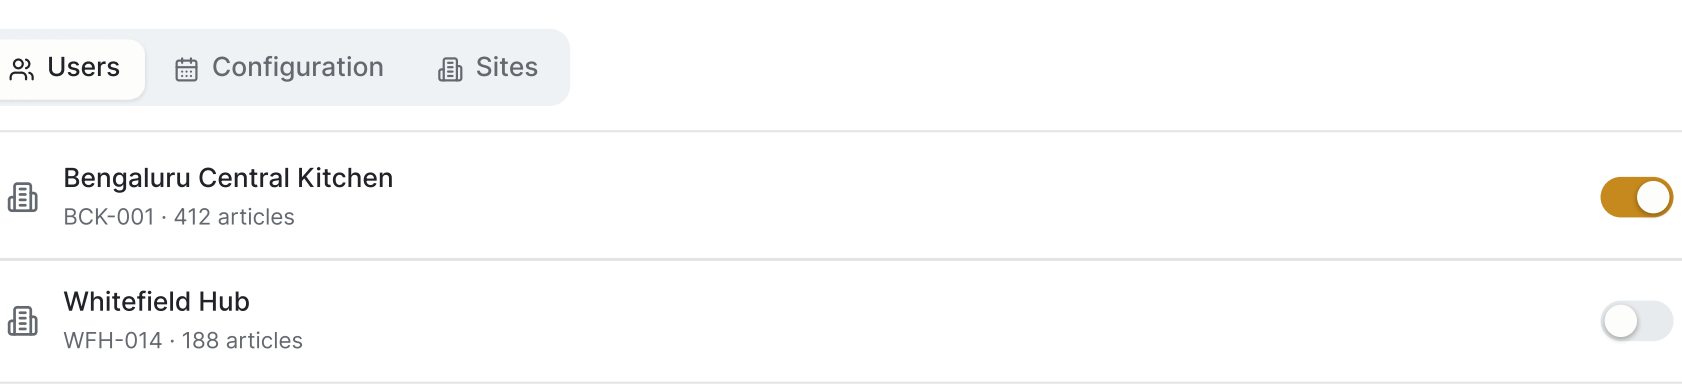
☑ Bengaluru CK BCK-001

☐ Whitefield Hub WFH-014

Active

The Settings → Users modal composes Label + **Input**, **Select** (Role), a **Checkbox** site multi-select, an **Active Switch**, and a right-aligned `DialogFooter` (Cancel + one primary Save).

Settings Surface — Tabs + Switch rows



Bengaluru Central Kitchen
BCK-001 · 412 articles

Whitefield Hub
WFH-014 · 188 articles

Settings pages are tabbed (`Tabs`); each tab body uses card panels with switch-toggled rows (site enable/disable, configuration flags) — bare **Switch** on the right, label + meta on the left.

07 Design Principles

1 · Data-Dense

High-density tables — operators focus on rows, not chrome. Compact by default (15px base).

2 · Neutral Foundation

Cool-slate neutrals keep the UI unobtrusive; amber is the single brand accent, used sparingly.

3 · Status-First Color

Color is reserved for state — green confirms, amber flags decisions, red rejects, blue informs.

4 · Tabular Numbers

All counts & IDs use `tabular-nums` for perfect column alignment.

5 · One Primary Action

Only one primary CTA per screen; everything else is secondary/outline/ghost.

6 · Consistent Pairing

Confirm/Reject always in the same order with the same colors — never swapped or stacked.

Retina AI · CMP Autobot — ingredient-article mapping design system · light-only, compact · generated from the current Next.js prototype (globals.css + components)
